**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 3, 5-13, 15 and 16, drawn to a small brushless motor having a cylindrical portion formed as a bearing housing, classified in class 310, subclass 90.
- II. Claims 2, 4 and 14, drawn to a small brushless motor having a cylindrical portion formed as a bearing housing and circuit substrate having a circuit juxtaposed to a flat portion of the stator base, classified in class 310, subclass 68R.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as circuit substrate having a circuit juxtaposed to a flat portion of the stator base in order to measure rotor speed or control electromagnetic fields in the stator. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2834

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
